iKB
Fibernet

Welcome

Thank you for signing up for IKB Fibernet!

What's next?
Your fibre optic Internet connection has already been pre-installed for you.

What do you need to do?

1. Please place the yellow fibre optic cable with the green plug into the IKB Fibernet socket.

2. Plug the blue connector of the fibre optic cable into the modem until the white mark is no longer visible.

3. Now connect the fibre optic modem to the power outlet.

4. After connecting the modem to the power outlet, **FIBRE flashes** after about three minutes. WLAN lights up constantly.

5. **Connect your computer via one of the four LAN ports** or via WLAN with the modem. The **wireless network key** can be found on the **bottom side of the modem**.

6. **Open an Internet browser** – you will be automatically directed to the modem homepage. If that does not happen, please enter **fritz.box** in the browser address bar.

7. Select **German** in the first window.

8. Next, enter the already provided **Fritzbox password**. Find this on the **bottom of your modem** (consisting of five letters and four digits).

9. Now please select **Austria** as the country.

10. Now the Fritzbox restarts. This might take up to 3 minutes.

11. Please re-enter the Fritzbox password as mentioned in point 8.

12. In the **Internet tab**, you will find the sub-tab **access data**. There, please select **IKB** and click on Apply.
